Out of Band

Management Industry

Information

Name	Out of Band Management	Sex	Really?
Breed	Secure modem	Color	Blue and White
Age	20 years	Hair	None

Markings/ Distinguishing Characteristics

Out of Band Management is defined as a secondary path to a network element not using the primary path. A popular usage is a telephone line with a secure modem attached. Do not be fooled by Terminal Server Vendors who are using the network only and claim to be "out of band". When the network is down - so are they!

Story

Out of Band Management has been hijacked by the Terminal Server industry! And we want it back. You cannot claim Out of Band when you use the same network to access the network element!.
